1 Installation Guide B1150-ML-xx

1.1 Important notes for B1150 series controllers

CAUTION!

In order to assure a safe and error free operation, and to avoid severe damage to system components, all system components must be directly attached to a single ground bus that is earth or utility grounded.

Each system component should be tied directly to the ground bus (star pattern), rather than daisy chaining from component to component. (LinMot motors are properly grounded through their power cables when connected to LinMot controllers).

All connectors must not be connected or disconnected while DC voltage is applied. Do not disconnect system components until all LinMot controllers LEDs have turned off. (Capacitors in the power supply may not fully discharge for several minutes after input voltage has been disconnected). Failure to observe these precautions may result in severe damage to electronic components in LinMot motors and/or controllers.

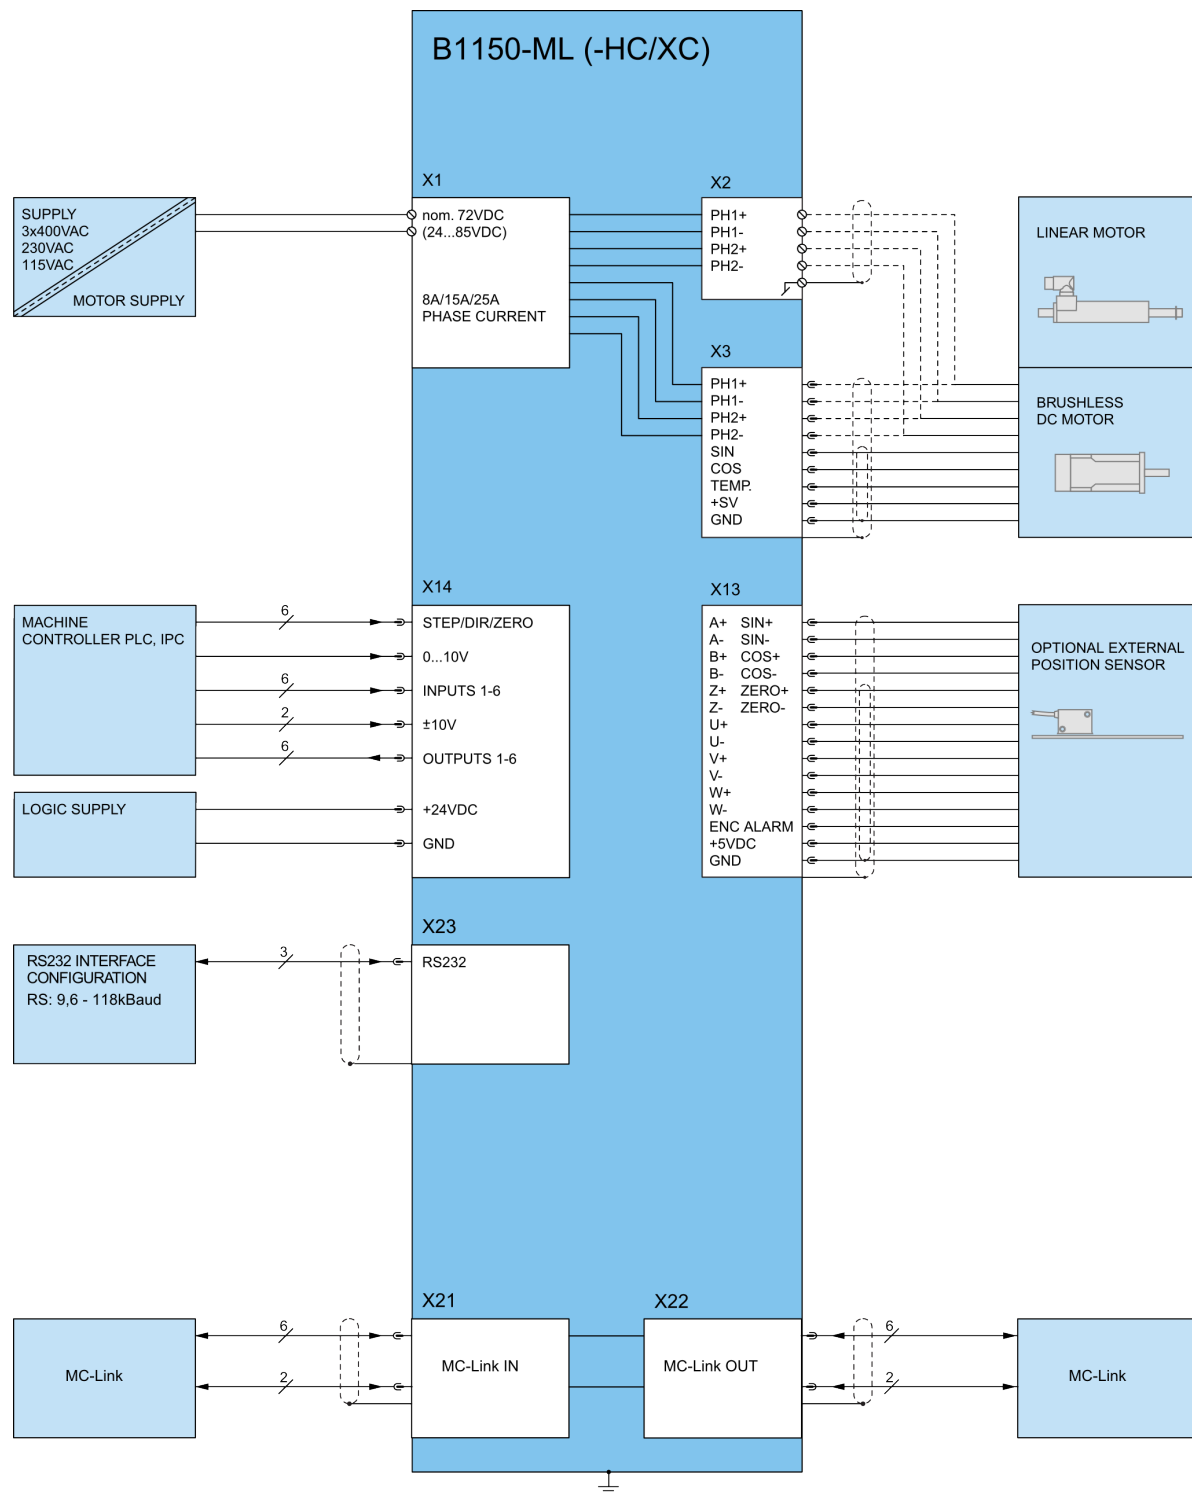

Do not switch Power Supply DC Voltage. All power supply switching and E-Stop breaks should be done to the AC supply voltage of the power supply.

Do not connect or disconnect the motors from controllers while voltage is applied. Wait to connect or disconnect motors until all LinMot controllers LEDs have turned off. (Capacitors may not fully discharge for several minutes after power has been turned off). Failure to observe these precautions may result in severe damage to electronic components in LinMot motors and/or controllers.

1.5 Software

The configuration software LinMot-Talk is free of charge and can be downloaded from the LinMot homepage (www.LinMot.com).

1.6 Power Supply and Grounding

In order to assure a safe and error free operation and to avoid severe damage to system components, **all system components* must be well grounded to either a single earth or utility ground.** This includes both LinMot and all other control system components to the same ground bus.

Each system component* should be tied directly to the ground bus (**star pattern**), rather than daisy chaining from component to component. (LinMot motors are properly grounded through their power cables when connected to LinMot controllers.)

Power supply connectors must not be connected or disconnected while DC voltage is present. Do not disconnect system components until all LinMot controllers LEDs have turned off. (Capacitors in the power supply may not fully discharge for several minutes after input voltage has been disconnected). Failure to observe these precautions may result in severe damage to electronic components in LinMot motors and/or controllers.

Do not switch Power Supply DC Voltage. All power supply switching and E-Stop breaks should be done to the AC supply voltage of the power supply. Failure to observe these precautions may result in severe damage to controller.

* Inside of the B1150 controller the *PWR motor GND* and *PWR signal GND* is connected together and to the GND of the controller housing. It is recommended that the *PWR motor GND* is NOT grounded at another place than inside of the controller to avoid circular currents.

1.7 Description of the connectors / Interfaces

1.7.1 X1

X1 Motor Supply

Distance between Controllers	mm (in)	15 (0.8) left/right 50 (2) top 100 (4) bottom 90 (3.5) front

1.10 Power Supply Requirement

Motor Power Supply

The calculation of the needed power for the motor supply depends on the application and the used motor. The nominal supply voltage is 72 VDC. The possible range is from 24 to 85 VDC.

ATTENTION: The motor supply can rise up to 95 VDC when braking. This means that everything connected to that power supply needs a voltage rating of 100 VDC. (Additional capacitors, etc...)

To provide short circuit power limitation, it is required to use an external fuse (10AT for blank labeled (LC) and 16AT for HC and XC labeled controllers).

Recommended Power supplies:

Item	Description	Art. No.
T01-72/420	72VDC, 15A peak, 420VA, 3x400VAC	0150-1966
T01-72/420-US	72VDC, 15A peak, 420VA, 3x230VAC	0150-1967
T01-72/900	72VDC, 30A peak, 900VA, 3x400VAC	0150-1842
T01-72/900-US	72VDC, 30A peak, 900VA, 3x230VAC	0150-1843
T01-72/1500	72VDC, 2x30A peak, 1500VA, 3x400VAC	0150-1844
T01-72/1500-US	72VDC, 2x30A peak, 1500VA, 3x230VAC	0150-1845
S01-72/500	72VDC, 500W, 750W peak, 1x100..120VAC/200..240VAC	0150-1874
S01-72/1000	72VDC, 1000W, 2000W peak, 3x380..500VAC	0150-1872

Signal Power Supply

The logic supply needs a regulated power supply with a nominal voltage of 24 VDC. The voltage must be between 22 and 26 VDC.

Current Consumption

Min. 200mA (no load on the outputs)
 Typ. 0.5A (all 6 outputs "on" with 50mA load and /Break with no load)
 Max. 1.2A (all 6 outputs "on" with 100mA load and /Break with 0.5A load)

**To limit the power in case of malfunction,
it is required to use an external fuse (2AT)!**

2 Installation Guide B8050-ML-xx

2.1 Important notes for B8000 series controllers

CAUTION!

In order to assure a safe and error free operation, and to avoid severe damage to system components, all system components must be directly attached to a single ground bus that is earth or utility grounded (see chapter Power Supply and Grounding).

Each system component should be tied directly to the ground bus (star pattern), rather than daisy chaining from component to component. (see chapter Power Supply and Grounding).

All connectors must not be connected or disconnected while DC voltage is applied. Do not disconnect system components until all LinMot controller LEDs have turned off. (Capacitors in the power supply may not fully discharge for several minutes after input voltage has been disconnected). Failure to observe these precautions may result in severe damage to electronic components in LinMot motors and/or controllers.

Do not switch Power Supply DC Voltage. All power supply switching and E-Stop breaks should be done to the AC supply voltage of the power supply.

2.4 MC-Link Multi-Axes Cabling

All components of a MC-Link system must be referenced to the same ground! The same 24VDC supply must be used for all components!

Use only LinMot MC-Link cable (Art.-No. 0150-3308) to connect MC-Link devices! Longer cables must not be used!

For configuration via RS232 use 1:1 connection cable to PC with only Pins 2, 3 and 5 connected!
Use LinMot RS Config Cable (Art.-No. 0150-3307).

Cabling has to be done exactly as depicted in this chapter!

Do not connect more than two devices per MC-Link connector!

2.4.1 8 Axes System

2.4.2 4 Axes System

2.5 Power Supply and Grounding

In order to assure a safe and error free operation, and to avoid severe damage to system components, **all system components must be well grounded to either a single earth or utility ground.** This includes both LinMot and all other control system components to the same ground bus.

Each system component should be tied directly to the ground bus (**star pattern**), rather than daisy chaining from component to component.

Power supply connectors must not be connected or disconnected while DC voltage is present. Do not disconnect system components until all LinMot controller LED's have turned off. (Capacitors in the power supply may not fully discharge for several minutes after input voltage has been disconnected). Failure to observe these precautions may result in severe damage to electronic components in LinMot motors and/or controllers.

Do not switch Power Supply DC Voltage. All power supply switching and E-Stop breaks should be done to the AC supply voltage of the power supply. Failure to observe these precautions may result in severe damage to controller.

Transport Temperature	°C	-25...70
Operating Temperature	°C	0...40 at rated data
Relative humidity		95% (non-condensing)
Max. Case Temperature	°C	70
Max. Power Dissipation	W	6
Distance between Controllers	mm (in)	15 (0.8) left/right 50 (2) top 100 (4) bottom 90 (3.5) front

2.8 Power Supply Requirement

Signal Power Supply

The logic supply needs a regulated power supply with a nominal voltage of 24 VDC. The voltage must be between 22 and 26 VDC.

Current Consumption

Min. 100mA
Typ. 150mA
 Max. 250mA

2.9 Ordering Information

Servo Controller	Description	Art. No.
B8050-ML-PL	POWERLINK MC-Link Master	0150-1877
B8050-ML-EC	ETHERCAT MC-Link Master	0150-1878
B8050-ML-IP	ETHERNET IP MC-Link Master	0150-1879
B8050-ML-PN	PROFINET MC-Link Master	0150-1880
B8050-ML-SC	SERCOS III MC-Link Master	0150-1881
Accessories	Description	Art. No.
RS232 Config Cable	AC01-Df/Df-2-RS1	0150-3307
	RS232 Config Cable DSUB9 f/f 2m (2-2/3-3/5-5)	
MC-Link Cable	AC01-RJ45/RJ45-0.2-ML1 MC-Link Cable 0.2m	0150-3308

The product must be mounted and used in strict accordance with the installation instruction contained within the Installation Guide, a copy of which may be obtained from NTI Ltd.

I declare that as the authorized representative, the above information in relation to the supply/manufacture of this product is in conformity with the stated standards and other related documents in compliance with the protection requirements of the Electromagnetic Compatibility (EMC) Directive 2004/108/EC.

Standards Complied with:

EN 61000-6-2		Immunity for industrial environment	
	EN 61000-4-2	Class B	Electrostatic discharge immunity (ESD)
	EN 61000-4-3	Class A	Radiated electromagnetic field immunity
	EN 61000-4-4	Class B	Fast transients / burst immunity (EFT)
	EN 61000-4-5	Class B	Slow transients immunity (Surges)
	EN 61000-4-6	Class A	Conducted radio frequency immunity
EN 61000-6-4		Emission for industrial environment	
	EN 55022	Class A	Radiated Emission
